Sourdough — in Portuguese *Massa Mãe Lêveda* — is a dough fermented through lactobacilli and yeasts naturally present in the environment and in the actual grains of the cereal from which the flour was made. Sourdough is characterised by a mild bitterness noticeable in the resulting bread and/or food produce. Due to the lactic acid produced by lactobacilli, preventing other microorganisms from manifesting, produce made with slow fermented sourdoughs have a pronounced intensity and a considerable longer life. Our starter is a story of love and daily dedication with about eight years of longevity, since the opening of the townhouse, and it is nicknamed **ROSA**
